

DERMASHIELD AI - SKIN ASSESSMENT REPORT

Diagnostic Result:	Peeling skin	Record ID:	DS-2
Severity Classification:	Medium	Date of Analysis:	2026-05-18 18:54:40
Recommended Specialist:	General Dermatologist / General Practitioner	Patient Name:	bala

Diagnostic Scans (Original Upload vs Explainable Grad-CAM Heatmap)

Explainable AI (XAI) Assessment

Peeling skin represents epidermal shedding, often resulting from acute UV damage (sunburn), contact dermatitis, or localized fungal/bacterial irritation. The model detected widespread micro-scaling patterns.

Diagnostic Confidence Distribution

Skin Condition	Neural Network Confidence
Acne	0.00%
Melanoma	0.00%
Peeling skin	100.00%
Ring worm	0.00%
Vitiligo	0.00%

Clinical Care Guidelines

- Apply rich barrier-restoration moisturizers containing Ceramides and Hyaluronic Acid.
- Avoid harsh chemical exfoliants, retinoids, or alcohol-based skincare products.
- Keep the affected area protected from wind, dry air, and friction.
- Stay thoroughly hydrated by increasing water intake.

MEDICAL DISCLAIMER: DermShield AI is an image analysis screening recommendation engine using convolutional neural networks. This computer-assisted assessment is designed for informational and educational purposes, and does NOT constitute formal medical advice, diagnosis, or treatment. Always seek the advice of your dermatologist or other qualified healthcare provider with any questions you have regarding a medical condition. In case of high severity warnings, please schedule a physical screening immediately.
